

BUDDHISM

SCIENCE & MEDICINE

INTERPRETATIONS, APPLICATIONS AND MISUSE

Buddhism offers a very rich theory of knowledge and important advices for health care and influenced different medical systems. But only a small part of Buddhist thinking is well known in the western world and many Buddhist ideas are polluted by misunderstanding and misuse in western thinking. The conference will offer a discussion with important Buddhist scholars and a lot of information about the right use of Buddhist thoughts in science, medicine and health care.

29 May - 1 June 2014

Schnirchgasse 9a - 1030 Vienna
